DETAILED ACTION

Election/Restrictions

The election of claims 1-17 without traverse is acknowledged. Claims 18 and 19 have been canceled. Claims 1-17 are treated on the merits below:

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-4, 6-11, 14, 15 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Vitali et al., "On the Reductive Amination of Aldehydes and Ketones Catalyzed by Homogeneous RH(I) Complexes", Chem. Comm., 2000, pp. 18-67-1868 (Vitali).

Vitali teaches the following reactions that anticipate the rejected claims:

Application/Control Number: 10/701,081

Art Unit: 1621

With regard to the required acids, the acid complexes disclosed by Vitali are Lewis acids, as well as the starting material in the second reaction above.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 5 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vitali in view of Borg et al., Tetrahedron Letters 40 (1999) 6709-6712 (Borg).

Claims 5 and 12 requires specific lewis acids, which is not explicitly taught by Vitali. However, Borg teaches that Lewis acids, such as Ti(OEt)₄ mediate the reduction reactions of ketones and amines, see page 6709. therefore, it si well within the motivation of those of ordinary skill to modify Vitali to include Lewis acids, such as Ti(OEt)₄, in order to enhance rate of reduction, see page 6710.

Claims 13 and 16 are objected to for dependence on one or more rejected claims.

Art Unit: 1621

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karl J. Puttlitz whose telephone number is (571) 272-0645. The examiner can normally be reached on Monday to Friday from 9 a.m. to 5 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thurman K. Page, can be reached at telephone number (571) 272-0602. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
